Study Guide and Practice Test Questions for the Elementary Education: Multiple Subjects Tests

Guaranteed to Raise Your Score

Test Preparation for the Praxis II Subject Assessments

- Comprehensive reviews of each section
- Proven test-taking strategies, tips, and advice
- Comprehensive practice test questions
- Increase your confidence and abilities

Test Prep Books

It could be a way that your mind protects itself from threatens and dangers.It could be a biochemical way for your brain to sort, file or store short- or long-term information. "Is 'Reality' Unreal? The course features a personalized learning map and more than 65 lessons, with authentic practice questions, skill checks, unit tests and a full-length practice test. You don't want to miss out on this top-notch material.Life can be difficult. "Jan. 14, 2013. With the right spark — say, a bolt of lightning — those cornerstones slowly develop into the cell walls and DNA that are suited to reproducible life. There's the off chance that 4 billion years ago, aliens dropped off a few microbes and let them run wild. Maybe this odd swamp of a planet really is a jewel of the universe, unduplicated and unlike any place else, anywhere.Yet we know that water and similar gases and elements exist on many other planets. "How Did Life Begin?" PBS. So maybe in 20 or 50 years, this list of unanswered questions will seem quaint and naïve. Anyone who wakes up from a vivid nightmare knows what it's like to feel stuck somewhere between a memory and a dream. Tumors expand and spread, ruining bodies and causing death.The growth happens due to DNA damage. How do we know that any of these objects and creatures actually exist? Other researchers say there's almost no way that Earth is the only headquarters for life — there could be as many as 40 billion habitable planets just in our galaxy. It's impossible to say. 2, 2014. All of it is life, and all of it reproduces to keep its kind alive. It was a watershed moment for the power of science.Centuries later, science continues to investigate difficult, bewildering questions every day. Therapies keep improving, lessening suffering and adding quality of life. You can see when a person (or even your cat or dog) is experiencing REM sleep because their eyes zip to and fro and their bodies may twitch and jerk, too. Interactive Practice Tests Use these interactive practice tests to prepare for the Elementary Education: Multiple Subjects Tests in a timed, online environment that simulates the test. Perhaps our eyes, ears and sense of smell don't really tell the whole story about the reality all around us.Perhaps the things and people in our lives are merely illusions. No matter how smart our collective species becomes, reality will always be an abstraction that we can never quite pin down.Our planet is teeming with trees, grasses, bird and bees. "We Are Not Alone in the Universe, NASA Scientists Say." Huffington Post. Each year, we understand new aspects of the disease. It may be that we just haven't quite figured out how to make it work for us.One possibility is wormholes, which are bridges of a sort that could help people move through time and space. After analyzing maps generated by observations made with the Baryon Oscillation Spectrographic Survey (BOSS), a super-powerful telescope in New Mexico, one group determined that the universe has an exceedingly flat floorplan. It's entirely possible that the universe could be made up of dozens or thousands of dimensions that we'll never experience in any direct way.It's unlikely that the scientific rabbit hole we've burrowed will ever end. Researchers are continually running experiments like this in laboratories, hoping to zoom in on the formula for making life.Try as they might, it's a mystery how those bits of non-living parts assembled themselves into actual living creatures. If you returned 10 years later by your perception, your family would have aged 20 years in that time.Or perhaps we could use cosmic strings, the so-called cracks in the universe, to navigate time. APEX Test Prep's Praxis 2 Elementary Education Multiple Subjects 5001 Exam Prep: Praxis 5001 Study Guide and Practice Test Questions [2nd Edition]APEX Test Prep believes that preparing for the Praxis II Elementary Education exam shouldn't be harder than the test itself.To that end, we pack our products with everything you need. Its familiarity, however, does not make it any less frightening.Cancer takes many forms and affects many parts of the body, but the hallmark of these diseases is uncontrollable cell replication. In some cases, these questions are so difficult that even our children's children will probably still be struggling for answers. You should expect most questions to require you simply to click an oval next to the correct answer. If you could breach an opening into a wormhole, you could theoretically enter it and then wind up on the other side of the galaxy in a different place and time.We could try traveling at the speed of light, at which point your world slows down greatly compared to the one you leave behind. One reigning thought is that the Big Bang is causing the universe to constantly expand faster than the speed of light. That damage may happen because of certain lifestyle factors, such as sun exposure, tobacco smoking or exposure to carcinogenic chemicals.By some estimates, more than a third of cancers could be prevented by avoiding cancer-causing habits. "The Future of Cancer: Closer to a Cure." Wall Street Journal. But most of us understand that 100 years from now, our grandchildren will look back at us with the same kind of mild sympathy, thinking of us as primitive and unknown. 16, 2015) Jennifer. Learn more about the Praxis Learning Paths program. April 26, 2015. "A Neuroscientist's Radical Theory of How Networks Become Conscious." Wired. That's especially true for undervalued and underappreciated species such as fungi, of which we're really only described maybe 10 percent. So although we may never fully defeat cancer, we'll keep beating it back, making our lives better, and diagnoses less terrifying.Everyone on the planet would like a better idea of what happens to them after they die. Priced Test Preparation Praxis® Learning Paths™ Program The Praxis® Learning Paths™ Elementary Mathematics Course helps strengthen your skills in the areas assessed by the Elementary Education: Multiple Subjects Mathematics subtest (5003) — at your own pace, in your own setting and at your convenience. It's a mystery, like so many others, that's overflowing with a captivating allure that draws our minds but never offers any real answers.Whether you're struggling with how big the universe might be or how life originated on Earth, our existence is brimming with bizarre twists of nature that we can't explain and may never understand. Get a copy of our APEX Test Prep Praxis II Elementary Education study guide to get access to:Test-Taking Tips: We give you the best practice when taking exams to help you pass with confidence. He began classifying both plants and animals using taxonomic language that named, ranked and classified creatures and plants.After generations of work, by some estimates we've still only accounted for 1.5 million species, or around 15 percent of the total number. 18, 2013. July 30, 2014. July 15, 2014. Maybe they're constructs of our own internal mechanisms, spawned by our subconscious for unknown purposes. It may be a way of reflecting on or releasing the stress of everyday life, or even an unconscious way of helping you unravel challenging experiences. (Oct. Or maybe we're blind to the principles of physics that really make life tick. 16, 2015) Brian. DNA, of course, provides instructions for all bodily functions, including cell growth. 16, 2015) Adam Estes. 29, 2014. But that doesn't stop scientists from trying to determine that elusive number.Botanist Carl Linnaeus realized two and half centuries ago that humans needed a system for keeping track of our planet's species. These APEX Test Prep explanations show you where you went wrong. There are just too many environmental assaults and minute bodily malfunctions for any one magic bullet to attack.The good news is that our perspective and treatment for cancers is evolving. Study Companion Calculator Use Our test familiarization videos offer important information you should know when getting ready for your test. July 17, 2013. Brain scans display how incredibly active our brains really are, flickering with constant activity as our 100 billion nerve cells ceaselessly fire, like a compact yet enormously complex digital network.But the brain is not the mind. Will we all float off into eternal bliss? For a look at what to expect on the day of your test, how to navigate through a Praxis® test and more, visit the Video Library. Aug. April 8, 2014. Then, of course, those creatures have to somehow evolve into beings with intelligence. Even to modern human science, the simplest of our planet's lifeforms are still an extremely complex stew of chemical reactions and cells. "Why Do We Dream?" Psychology Today. Now, you can avoid making the same mistake on the actual exam.Get the experts of APEX Test Prep on your side. You aren't sure whether that dream means something, unless it's that perhaps you consumed too many hallucinogens during college, or merely ate some bad carrots yesterday.Scientists and sleep experts know when people normally dream. Our minds teem with their inner conversations and questions about who we are and our purpose in the world. The survey was based on observations of "only" 1.2 million galaxies, which is a drop in the universal bucket, but it's a strong clue that our universe isn't sphere shaped.So is that flatness infinite? In fact, some people might argue that we're just now learning to ask the truly big questions.What happens to us after we die? The questions written by APEX Test Prep are as close as possible to the questions found in actual tests. "Consciousness May Be a Lot Like Drinking Coffee, Say Scientists." Gizmodo. When the Black Death ran rampant through Europe in the Middle Ages, no one knew exactly how or why the awful disease spread. "Are We Alone in the Universe?" New York Times. Many people who have gone through near-death experiences and then come back to life speak about tunnels of light or flashbacks to life occurrences or conversations with loved ones who've passed away. 9, 2015. "86 Percent of Earth's Species Still Unknown?" National Geographic. 16, 2015) Joel N. Other times, we're left grasping into the darkness of our own ignorance and wondering what any of it really means. Thank you very much for your cooperation. You Asked Google - Here's the Answer." The Guardian. 16, 2015) Tanya. Will the evil among us be damned to the pits of Hell? 16, 2015) Elizabeth. Either way, science can't really tell us yet whether the universe is infinite or finite.As with everything else, researchers do have theories. Hang out by a black hole and your experience of time would be roughly halved compared to life on Earth. June 3, 2015. Yet even with brilliant minds converging via a worldwide computer network, we still don't have all of the answers. Is it some all-powerful god in control or are there physical and mathematical principles driving the engine of our existence?Sometimes, after centuries of missteps, we humans finally stumble into real answers to real questions, such as why diseases spread. And of course, many religions have supernatural explanations for life's origins.Many scientists think that life is a natural progression for planets that feature the necessary ingredients for biology, such as carbon, hydrogen, oxygen and other fundamental building blocks. Our current science says that nothing can move as fast as light, though, and even if we could, it might tear our bodies apart.Maybe we could orbit massive black holes, which have such incredible gravitation pull that they actually slow down time. Like store employees turning of the lights at a megastore after closing hours, your body's cells begin to blink off, one by one, until your heart and brain cease activity.What happens after your brain clicks off, though, is still a complete mystery. Electrical activity doesn't explain how a physical substance can create a non-physical condition like consciousness. Dec. "Humans Creating Sixth Great Extinction of Animal Species, Say Scientists." The Guardian. Test prep doesn't have to be. All of those experiences could have biological origins, perhaps spurred by lack of oxygen or wild biochemical fluctuations.Of the many questions we face about our existence, this is one that may never, ever be answered. Unfortunately, they can't tell us about it because, well, they're all dead.The subject of the afterlife — or lack thereof — is one of the oldest questions troubling humankind. This subscription is good for 90 days or 10 uses, whichever comes first. How did a mass of cells shift from an inert collection of organic molecules into a wiggling and sometimes even intelligent being?The short answer is: We don't know exactly how life originated. 22, 2007. "Greatest Mysteries: How Did Life Arise on Earth?" Live Science. After all, if creatures are disappearing en masse, we humans could be next.Human reality is a slippery concept. "Are We Any Closer to Knowing How Many Species There Are on Earth?" Scientific American. But how in the world did life begin in the first place? Each time you take a practice test, the same questions will appear in the same order. They entertain and haunt us and serve as reminders that our inner world is just as deep and strange as the exterior world all around us.Cancer is a common human terror. Retaking or repurchasing the same Form does not give you different practice questions or change the order in which the questions are delivered. "How Did Life Begin?" Universe Today. Or will we all be reincarnated as angry hippos or fluffy cats?Scientist do understand the beginning stages of death. Scientists Work on a Way to Find Out." NBC News. "What Happens When You Die?" Live Science. 16, 2015) Sarah. 16, 2015) Stephanie. 24, 2015. You can also supplement your learning experience with one-on-one human coaching via Zoom® video conferencing for targeted support. 16, 2015) After many generations, we figured out that rat fleas and bacteria were to blame. These strings (which are also sometimes loops) have so much mass that they may actually cause the space-time around them to fluctuate.Manipulating any of these scenarios might grant us the power to finally realize time travel. 16, 2015) Week. The universe could be a hologram, a "Matrix" style computer creation meant to entrap our minds and enslave us to a nefarious purpose.Scientists and physicists aren't sure we'll ever understand the nature of reality. "Why Do We Dream? They may ask you to zoom in on details in a graphic or picture, click boxes next to all that apply, click on checkboxes, click on parts of a graphic or sentence, use a drag and drop feature, or select your answer from a drop-down menu. 16, 2015) Sleep Foundation. How did so much life appear on our planet when others seem devoid of any species at all? Sept. Because we can't see beyond the speed of light, we'll never really know if there's an edge to the universe.We'll likely have to spend our lives wondering about the true nature of the universe's size. Feb. It's also swarming with countless bacteria. They know how the human body begins shutting down. So for now, traveling in time is still simply the stuff of books and movies.When you look up on a dark night and see the uncountable stars scattered throughout the skies, it's easy to think of the universe as infinite. 16, 2015) Paul. Or maybe you see those illuminations as similar to the glow-in-the-dark stars on your bedrooms ceiling, just pretty decorations to behold, a high but dead-end ceiling. Other factors play a role, too. We don't really understand how they emerge, evolve and survive in an incredibly diverse range of environmental conditions. Who, if anyone, pulls the strings of our universe? But humanity will keep trying.During your latest shut-eye adventures, you chopped the head off of a six-legged rabbit while wearing a neon pink bonnet and screaming, "Gesundheit!" at the top of your lungs. We are, as far as we know, the only creatures with this sort of active consciousness. We also have no idea where this consciousness comes from.Our brains, of course, are the central computers of our bodies, controlling biological functions and helping us think our way through all of life's loops and hurdles. © 1996-2014, Amazon.com, Inc. And hey, there are billions of people who already know the answer to that question. We keep discovering new particles and fundamental forces, from molecules to atoms, that drive our bodies and our world. In contrast, we've done a pretty good job with our fellow mammals, most of which are already logged.All of the numbers are simply statistical guesses, so we may never really know if they're accurate. Typically, you dream during the rapid-eye movement(REM) portion of the sleep cycle. "Yes, Time Travel is Possible: Here's How." Gizmodo. Instead, we'll all be left yearning for wondering, searching for sort of meaning in the death.Some may think we're the only intelligent lifeforms in the universe. It could be that we are as yet still ignorant to the characteristics that truly define life. That's an awful lot of potential for alien life.There are some necessary requirements for life to arise. Many people inherit defective DNA from their parents and have a predisposition for developing certain types of cancer, even if they live totally healthy lives.The myriad variables and unique genetic makeup of humans make some scientists doubt that we'll ever have a cure for every type of cancer. 16, 2015) Brandon. "Here's What (Scientifically) Happens When You Die." Popular Mechanics. Where's your dignity, ape men? Now. If we keep looking and happen to find even a shred of evidence, such as fossilized remains or tiny bacteria, it seems more likely that somewhere across the stars that another species is also looking to the heavens and pondering potential neighbors somewhere in the universe, too.We humans have an awareness of our surroundings and also of ourselves. Score: 0% Rank: Correct Answer: In order to continue enjoying our site, we ask that you confirm your identity as a human. July 1, 2004, or its affiliates Score: 0% Rank: Correct Answer: Questions:Time limit:Science5560 You will have 60 minutes to complete the 55 questions. THE PRAXIS Elementary Education: Multiple Subjects-Science exam in its entirety consists of 55 selected-response questions. The test is administered via computer. Not only does a planet need the right mix of elements and conditions, there also has to be a spark that gives rise to living creatures. April 18, 2013. 13, 2015. "Babies Have Consciousness." Live Science. Will our consciousness merely vanish once our bodies have expired? Perhaps the bigger concern is that species seem to be disappearing a rate faster than at any time since dinosaurs vanished 65 million years ago. Even we can figure out the science, though, there are numerous paradoxes that might make time travel unfeasible or downright dangerous. Some religions explain consciousness as a gift from God, embedded into our bodies to guide us through this world.Scientists veer more towards biological origins — they see consciousness as a collection of biological processes that build towards more complicated thinking that eventually culminates in self-awareness.Scientists have determined that animals, such as dogs, almost certainly have consciousness, but that it's a lower (or different) level of awareness than that of humans.Earth is home to a dazzling array of creatures and plants. 16, 2015) Tanya. Those questions may trouble us and hound us for our entire lives — but they are also an essential part of the human experience.Originally Published: Apr 6, 2016It's easy for modern people to look back on their ancestors with more than a little disdain. 16, 2015) John. Each course option below is a 180-day subscription. This includes testing tips, clear instruction, comprehensive material, practice questions, and detailed answer explanations.We want you to succeed. 25, 2011. "Time Travel: Four Ways in Which it Could be Possible." Jan. It's more likely, though, that at least some these questions are going to stand the test of time.Related Stories:Breus, Michael J. It's perhaps even more intriguing to ponder what our world would look like if you could instantly peek 1,000 years into the future.As it turns out, time travel might not be fiction. June 19, 2015. The brain's electrical patterns are very active in this phase, just like when you're awake. But researchers don't really know WHY you dream. You're training with the pros!Detailed Answer Explanations: Every practice test comes with an in-depth answer key.Nothing is worse than missing a question and not knowing why. 16, 2015) Craig B. More powerful telescopes could be one key to finding it.Or it could be that life here is just a statistical aberration, an accident of the weirdest kind. 16, 2015) Traci. 23, 2013. The deeper we delve into physics, the stranger the mechanics of our universe become. The evolution of human science and knowledge has that kind of effect. Pink flamingos fill the skies, humongous elephants stomp through the savannas, and weird frogs and ferns hide in crevasses everywhere. No matter the case, the search for life's origins will undoubtedly continue for a long while.As science fiction concepts go, time travel is one of the most captivating. We make sure you are properly prepared for any question.Praxis II Elementary Education Practice Test Questions: Test out your skills and evaluate your readiness. 16, 2015) Fraser. 16, 2015) Joe. Those experiences lend credence to the idea that there are limitations to our senses. Because of this, there can be a variety in the style of questions that are asked.You should expect to see three main types of questions: single-answer, stimulus-based, and cluster.
