## React table pagination example codepen

Simple table order, pageing tutorial with JS. The page is good for eCommerce sites and apps. Page Li: First-Child> A. 1. I intend to use the Swapi API to have data to refer to within my example. Made with HTML CSS JavaScript Author Steven Brannum Demo. If you skip this step, you will need to define your styles or use bootstrap. Types of page: there are many types of pageing in CSS. Pageation Function (CurrentPage, PageCount) {Let Delta = 2, left = Current page - Delta, Right = CurrentPage + Delta + 1, Result = []; Result = array.da ({length: PageCount, (v, k) = k> + 1) .Filter (l => l && l > = Left && l < Right); If (result. Length> 1) {/ Add first page and points if (result [0]> (1) IF (Result) 2) {Result.unshift ('...') Result.unshift (1) // Add points and last page IF (Result [result. Length - 1]
