## Catalog autocad plant 3d

Search Apps Search Publishers Apps Publishers Show All One of the nice things about using AutoCAD Plant 3D is that there is a wide range of available piping and component catalogs, such as ASME, AWWA and DIN, come out-of-the-box while many more like Victaulic, Pharma, Grayloc, etc. can be downloaded freely from Autodesk's App Exchange. Both the out-of-the-box catalogs and any additional content Drant's content. Unfortunately this is not usually the best location to set as Plant's content directory if you are working collaboratively. There are a number of reasons why you may want to set this location to a central location Allow multiple project admins or users to see the same catalogs for spec generation Restrict what content and specs are available to users for modelling by removing unneeded files With these points in mind, there are a few options available to move this directory off the C drive and onto a network share. Deployments If you haven't created your Plant 3D deployments or installed Plant 3D to your workstations then you can set this content location during deployment creation or installation. This will copy all the default content to the specified folder during installation. Further, all future Plant and downloaded content pack installation. Further, all future Plant and downloaded content pack installation. Further, all future Plant and downloaded content pack installation. Further, all future Plant and downloaded content pack installation. Inside the content table click the Default text in the Mode column and select Local. That will allow you to browse for a location or type a path in the Path column. Hint: Use UNC paths where possible rather than using networked drive letters. Setting the Content location inside the deployment will copy all the out-of-the-box specs and catalogs to this location and set this path in the registry on each workstation. AutoCAD Command Line If you already have Plant installed on multiple workstation. Simply moving or copying the content folder to a different location using Windows Explorer will cause errors to occur inside the Plant 3D as an Administrator. In Windows right-click on the Plant 3D shortcut and select Run as Administrator or you will run into the following error when trying to run the command. Once Plant is loaded open any drawing (project or non-project related) and type PLANTMODIFYSHAREDCONTENTFOLDER into the command line. In the Modify Shared Content Folder dialog box browse to (or type) the network path where the content will be moved to. You also need to select whether or not to copy the content from the existing folder to the new location. Copying the folder contents only needs to be done on the first workstation to simply change the Plant 3D configuration. Click OK to change Plant's local configuration. Click OK to change Plant's local configuration. the specified path. Don't forget to delete the old content folder once you have finished. This method works well if there are a minimal number of machines to change and if the users have administrative privileges to their computer. In larger organizations, with many users or where users do not have admin rights, there is a scripted option that can be used. Scripted Command Line The Plant content directory can be changed by creating a batch file and an AutoCAD script file with the proper commands. First, a batch file and an AutoCAD script file with the proper commands. First, a batch file and an AutoCAD script file with the proper commands. First, a batch file and an AutoCAD script file with the proper commands. /product PLNT3D /language "en-US" /w "3D Piping" - sets the language (w "3D Piping" - sets the Plant interface to the 3D Piping workspace /nologo - hides the Plant splash image from displaying /b [YOUR PATH HERE]\[YOUR SCRIPT].scr - runs the script file once Plant 3D loads The AutoCAD script file should contain the following text: filedia 0 openproject "[projectpath]\Project.xml" -PLANTMODIFYSHAREDCONTENTFOLDER D:\autoCAD Plant 3D 2017 Content N filedia 1 quit Y Filedia 0 - Turns off command dialog boxes openproject [projectpath]\project.xml - Opens a specified project. Make sure this is a common project all computers have access too. -PLANTMODIFYSHAREDCONTENTFOLDER D:\AutoCAD Plant 3D 2017 Content - Sets the content folder location in Plant N - Tells the PLANTMODIFYSHAREDCONTENTFOLDER command dialog boxes back on Quit Y - Quits the application without saving changes to the current drawing file loaded. Make sure to set the paths to those needed for your environment and keep in mind that the batch file will need to be Run as Administrator. Finally, if the Plant license has been borrowed from your license server the script will halt at the borrowed license pop-up. A manual click on the Close button will be required to continue. This is just one step for setting up AutoCAD Plant 3D for use in a multi-user environment but it is often overlooked. Once your content in the centralizing the content is important to reduce space used on your system's hard drive and to ensure the proper piping specs and catalogs are being used. Remember to keep an eye on the app exchange as content packs and catalogs are continually added and updated. -DAP L JumpStart Guide Trimble QuickPen PipeDesigner 3D Software Revision A February 2013 F Englewood Office Trimble Navigation Limited 384 Inverness Parkway, Suite 200 Englewood, Colorado 80112 (800) 234-3758 More information Table of Contents General Setup..... ... 4 ShipConstructor.... ... 4 Getting Started..... .
