Chapter 1 • Introduction

1.1 A gas at 20°C may be *rarified* if it contains less than 10^{12} molecules per mm³. If Avogadro's number is 6.023E23 molecules per mole, what air pressure does this represent?

Solution: The mass of one molecule of air may be computed as

$$m = \frac{\text{Molecular weight}}{\text{Avogadro's number}} = \frac{28.97 \text{ mol}^{-1}}{6.023E23 \text{ molecules/g-mol}} = 4.81E-23 \text{ g}$$

Then the density of air containing 10^{12} molecules per mm³ is, in SI units,

$$\rho = \left(10^{12} \frac{\text{molecules}}{\text{mm}^3} \right) \left(\frac{4.81E-23 \frac{\text{g}}{\text{molecule}}}{\frac{\text{kg}}{\text{mm}^3}} \right) = 4.81E-11 \frac{\text{kg}}{\text{mm}^3} = 4.81E-5 \frac{\text{kg}}{\text{m}^3}$$

Finally, from the perfect gas law, Eq. (1.13), at 20°C = 293 K, we obtain the pressure:

$$p = \rho RT = \left(4.81E-5 \frac{\text{kg}}{\text{m}^3} \right) \left(287 \frac{\text{m}^2}{\text{s}^2 \cdot \text{K}} \right) (293 \text{ K}) = 4.0 \text{ Pa} \quad \text{Ans.}$$

1.2 The earth's atmosphere can be modeled as a uniform layer of air of thickness 20 km and average density 0.6 kg/m³ (see Table A-6). Use these values to estimate the total mass and total number of molecules of air in the entire atmosphere of the earth.

Solution: Let R_e be the earth's radius = 6377 km. Then the total mass of air in the atmosphere is

$$m_t = \int \rho dV = \rho_{avg} (\text{Air Vol}) = \rho_{avg} 4\pi R_e^2 t \text{(Air thickness)}$$

$$= (0.6 \text{ kg/m}^3)^2 \pi (0.377E6 \text{ m}^3) (20E3 \text{ m}) = 6.1E18 \text{ kg} \quad \text{Ans.}$$

Dividing by the mass of one molecule = 4.8E-23 g (see Prob. 1.1 above), we obtain the total number of molecules in the earth's atmosphere:

$$N_{molecules} = \frac{m(\text{atmosphere})}{m(\text{one molecule})} = \frac{6.1E18 \text{ grams}}{4.8E-23 \text{ gm/molecule}} = 1.3E44 \text{ molecules} \quad \text{Ans.}$$

By the end of the section, you will be able to do the following: Defining, describing and differentiating the four fundamental forces describe transport particles and explains how their exchange transmits strength explains how particle accelerators work to collect evidence on particle physics learning The goals in this section will help your students master the following standards: (5) Scientific concepts. The student knows the nature of the forces in the physical world. It is expected that the student: (h) will describe evidence and effects of strong and weak nuclear forces in nature. Particle particle particle particle bundle Cyclopera Carrie Feynman Diagram of Graviton Particle Physics Pion Quantum Electrodynaminc Synchrotron w/ "W" & "B" Boson W + W + Bosonic Nuclear Strength Z 0 Z 0 Bosons before section, make students create a list of different forces. In addition, it can be valuable to review the gravitational and electrical fields, Rutherford's Golden Lamina experiment, the van de Graaff generator, the decay of particles and the theory of the moment of the impulse. Despite the apparent complexity within the universe, only four basic forces remain. These forces are responsible for all interactions known by science: from small to large to those we experience in our daily life. These forces describe the movement of galaxies, chemical reactions in our laboratories, the structure within atomic nuclei and the cause of radioactive decay. They describe the true cause behind familiar terms such as friction and normal force. These four basic forces are known as fundamental because they alone are responsible for all the observations of forces in nature. The four fundamental forces are gravity, electromagnetism, weak nuclear force and strong force onaditouq onaditouq orol li otut isauq ehc orol adrocIR .osroc leh essuccid aetapsa etats onais latinemadnof ezrof orttaaq elled eud ehc aedil'lhad itaiggarocs eresse onossof itmeduts inuaCL ottegg nu es ebberdeccus asoc ,etrof azrof anu "A Ativarg al ebc eritnes a ednet etneg al iuc rep oviton li eritues "Aup eniossucsd al . relationship of the strong force more visible, it shows the students the repulsion is a strong positive force, while the attraction is considered a strong negative force. [AI] Ask students which distance is aligned with the valley which represents the utmost attractive strength. Note - This is equivalent to the average distance between two nucleons. The Weak Nuclear Force is Responsible for Beta Decay, as seen in the equation $Z + 1 \rightarrow Z' + e^- + \bar{\nu}_e$. Enrico Fermi was the first to imagine this type of strength. While this force is properly labeled, it remains the most strong of the gravitational force. However, its range is even smaller than that of the strong force, as can be seen in table 23.1. The weak nuclear force is more important than it may appear right now, as they will be addressed when we discuss quarks. Approximate force of relative force [1] [1] The relative force is based on the strong force felt by a couple of proton protons. Gravity 10^{-10} N $\approx 38 \text{ GeV}$ $\approx 10^{13} \text{ N}$ $\approx 10^{13} \text{ N}$
