Alexa device settings

Amazon's Alexa voice assistant is powerful and features full of features to make your life easier for you and your family.

It can tell you your schedule, control your smart home devices, play music, and even make language and video calls. You can use Alexa with your smartphone, but it's more useful for a smart speaker or smart screen in your home. Echo speakers and Echo screens let them say Alexa and give voice commands without touching anything. It seems almost magical. However, this can be black magic, especially if you are interested in the privacy and security of your home. Amazon can record everything Alexa says, and depending on their internal smart devices, they can share their Wi-Fi network with strangers without realizing it. You can change these settings with the Alexa app on Android and iOS, but first you need to know how to find them. You must do the following with Alexa before using it at home. 1. Distribute or limit standard voice records and Amazon calls everything you say to Alexa. Reserves> Manage Alexa data> Select the backup of data records in accordance with the language records. Do not choose records and do not press to confirm this.

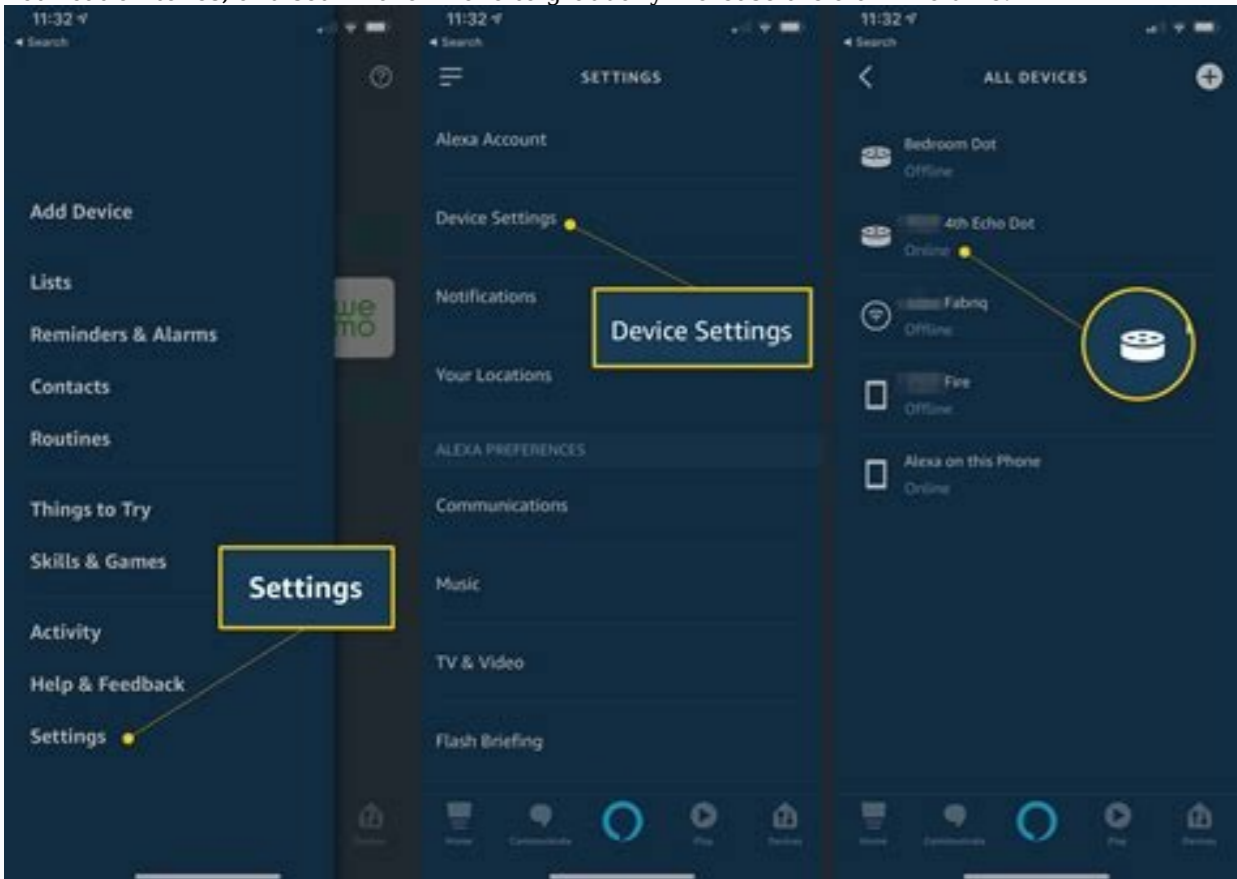

Alexa would not log any of her requests, just process them and have this data evaporated so no one else can use it.
This turns off voice identification with Alexa, which can be problematic if you have several people in your home. Luckily, you can also ask Alexa to save recordings for three months. Check if you can turn on the erase table so you can have Alexa erase everything you say. If you limit the smart home appliance, the history of the sounds that Alexa recognized, also record the conditions of the smart home devices controlled by Alexa. If you turn on Alexa's safety features, recordings like broken glass or smoking/co sound more helpful than Alexa VoiceAmazon's vocal assistant Alexa is powerful with many features that make life more comfortable for you and your family. This can inform about the program, check intelligent appliances, play music and even allow you to make voice calls and videos. You can use Alex with a smartphone, but it is more useful for a smart speaker or smart screen at home. The Echo and Echo screens allow Alexie to say and give voice commands without touching anything. It almost looks like magic. However, it can be dark magic, especially if you keep us with the privacy and safety of your home. Amazon can save everything you say to Alexa and, according to intelligent appliances, you can share your Wi-Fi network with strangers without realizing it. Alexa Android and iOS allow you to modify these settings, but you must first find them. Here's what you should do with Alexa before starting to use it at home. 1. Disable or limits vocal recordings by default, Amazon retains everything you say to Alexa. Privacy> Manage Alex data> Choose how long to write the items in voice documents. Coose do not write rumors and click confirmation. Alexa does not record any of your query, processes them and allows them to discard those data so that no one else can use them.
This disable Voice ID with Alexa, which can be a problem if there are more people in your family. Fortunately, you can choose to make Alexa save the recordings for three months.
There, be sure to activate the elimination card so you can order Alexa to eliminate everything you say. The chronology of the detected sounds of the limit of the Smart Home device also records the state of intelligent appliances controlled by Alexa. If Alex's safety functions are activated, records play like broken glassBecause if you want to test access to your intelligent devices or listen to the suspicious sound that Alexa perceives you, you can do this using Alex's confidentiality offer by touching the history of intelligent domestic devices and exploring the history of open devices. Sounds. These records cannot be deactivated, but you can limit them. By default, Alexa will keep them forever, although in the last 30 days you can see only the history of your device for an intelligent house. Access Multiple> Settings> Alexa Confidentiality> Data Management Alexa> Select Records of Time (in Chronology of Home Intelligent Devices)> Save History for 3 months> Confirm. Do the same in the history of detected sounds. Do not let Amazon's employees listen to the offer of confidentiality that Alexa is another important parameter from which you want to delete the brand: This helps to improve Alex. It seems innocent and the application wants to damage its recognition of voice and other features, but if you read a small press, you will see that it allows Amazon to collect all your recordings and even pass people explore them. The aim is to ensure that the company confirms that it works correctly and theoretically should improve Alexa's accuracy. But if you want a person not listening to when you ask Alexa Time (or worse), turn it off. Go to plus> Settings> Alexa Confidentiality> Manage your Alexa. Scroll down until it helps to improve Alex and pass the voice recording option. By enabling availability, if you have problems with vision or hearing or solve speech disorder, Alexa can provide limited assistance. Access Multiple> Settings> Availability in which you can choose between four different accessibility features. . The function announces when the Echo device plays the sound of the declaration when you are close to them and that Alexa offers notifications. This is useful if you have visual disorders that you will not notice the light of yellow confirmationEcho.real Time SMS and signing calls are two mutually excreting video connections on an echo show. Real -time text offers screen keyboard and shows the text while writing, while the call signature automatically converts each language and recognizes the text signatures on the screen. They cannot be used simultaneously. A shared network with which the device works better. It expands the range of different ring devices and other Alex products, but shares a small bandwidth with other Amazon users in the area. In principle, it transforms part of your Internet connection to a network for all around you and can open a home network and hacker. You can deactivate it in Alexa. Scroll to multiple> Settings> Account Settings> Amazon roadways. If it is activated, press the button until it shuts down. If you say he is affected, leave him alone. (If you do not see the possibility of tiles, your Amazon device is probably not compatible with plaster.) Simply dangerous, especially in the case of standard Amazon settings. Anyone who recognizes Alex around his devices can control everything from his account to the question; Purchases and sent 1 by clicking. Using Alex to order products with one voice sounds useful, but do you really have to do it because comfort often prevails (is open in a new window)? In Alexa, go to multiple> Settings> Account Settings> Purchase Purchase> Purchase Control. Choose "No one" (disable the purchase of a language) that prevents Alexa from receiving voice commands. If you want to make language purchases, you can also set up AlexaProcess them into a four-digit voice code by selecting each voice code. settings, contacts and messages in different ways. Alexa can learn to recognize everyone by their voice (if you allow Alexa to save voice recordings) and even by face thanks to the compatible Echo Show smart display. Any adult can set up their own profile at home by speaking to an Echo or other Alexa device by saying, "Alexa, get to know me." Alexa will help them by configuring their profile and learning Voice ID. But for kids at home, you want to do it for them and configure parental controls. In the app, select More > Settings > Your profile and family > Add someone else. Enter their name, select Baby and enter your birthday. Next, click the Profile & Family menu and follow the instructions to configure all the profile restrictions and teach Alexa Voice ID (you need your child to be in the room for this step). 8. Your music services and streaming that you don't need to rely on Amazon Music and audio content is controlled by Alexa. Alexa supports a number of third-party services, including Apple Music, Apple Podcasts, SiriusXM, Spotify, and Tidal, so you can ask Alexa to remember your favorite playlists, stations, or podcasts. In the Alexa app, select More > Settings > Music & Podcasts. Tap the appropriate service and select Add usage. Follow the instructions below to connect your account to Alexa.
