The answer is up to you. Using Root Explorer can cause programs/games you have installed on your device if you deleted an important program or game item that ran for them. You can also remove system sounds or other basic requirements for your Android device and the device may not run properly. Therefore, we advise you not to use a feature that you are not familiar with. If you don't know what's going on, you won't try. Just find a quick Google search after changing the file name and find out if you should delete it or save it intact. I'm forbidden by K. When does a program or game developer find out that I use Root Explorer? The answer developer of the program or game doesn't know you're using Root Explorer because it's developed. Also, there is no evidence that our user is banned by the lead researcher. Question: Are all programs and games supported? Game response: Offline root explorer games can break. We cannot use this online gap application, because it can only modify the data stored on your device only. However, if you are saved in standalone games on the game server, we cannot replace them because we cannot log in because we can log in to the server. To crack such games, you need to crack a server that every tool can't be used that can still be found on android. Programs: Not much you can do with programs, but all programs are still supported. You can easily change them, but make sure what to do. F. My device says installation is blocked. What to do? The answer is that the devices by default blocked the installation of unknown sources for security reasons. However, they are 100% safe with a radical seeker. Therefore, you can take these steps to fix them. Go to Android settings => Applications. Now turn on Unknown Sources. May be elsewhere in some devices. You need to look for this option and activate to buy Root Explorer on your device. Question: What are the detailed properties of a radical seeker? The answer is many features of Root Explorer. Many functions are described below: several tabs: Root Explorer is one of the few applications behind the browser with this function. You can open different tabs, like in web browsers Recommended: Gamely test version: Rent an unlimited number of games for a month for one month for an American link to The Root Explorer? The answer depends on you. The use of a root manager can lead to a certain damage to applications / games installed on your device if you remove an important application element or the game needed to start. In addition, you can also delete system sounds or other basic requirements from your Android device and your device may work incorrectly. Therefore, we recommend that you do not use features you don't know. If you don't know what's going on, don't try it. Simply perform a quick search on Google under the file name you want to edit to see if you need to delete / edit or let it break. B. Do I get a ban when the developer determines the application or the game I use Root Explorer? Developer of the application or game does not know that you are using root explorer because it is developed. In addition, there is no evidence that our user has been disabled with Root explorer. B. Are all applications and games supported? Response of Game: Autonomous Games can hack with Root Explorer. We cannot use this app to reduce the online game because you cannot change the stored data on the device. In the game offline, however, you are stored on the game server so that we cannot change them because we do it, do not have access to the server. If you want to chop these games, you have to chop a server that Android is still not available with the tool. Apps: In fact, you can only do a little with applications, but in any case all applications are supported. You can easily change them but make sure what to do. B. On my device it is written that the installation is blocked. What should I do? The answer is based on the fact that your device blocks the installation of unknown resources by default for safety reasons. However, they are 100% protected by a root explorer. You can therefore take the following measures to solve this problem. Access to Android => app parameters. Now turn on "unknown sources". This can be elsewhere in some devices.
