What is the difference between the benelli m2 and m4

It can reliably function for at least 25,000 rounds without replacement of any major parts.Click to see full answer. Herein, how many rounds is a Benelli m4?You'll have 7 rounds in the magazine, if you take the mag apart you'll notice there is a plug in the standard mag. You have the ability to have one round on the carrier, and you can have a round in the chamber. For a total of 7+1+1 or 9 rounds.Additionally, what is the difference between Benelli m2 and m4? Both have the pistol grips, both hold 5+1 rounds. Both shoot a wide variety of loads reliably. There are three major differences: 1- The M4 (7.8 lbs) weighs 1.1 lb more than the M2 (6.7 lbs). 2- The M4 is gas operated, the M2 uses Benelli's inertial system. Herein, how many rounds does a Benelli m2 hold? A popular sporting variant of the Benelli M2 is the XRAIL design offered by Roth Concept Innovations. This modified magazine tube gives the shooter a 25-round magazine capacity by using 4 tubes in tandem like a revolver's cylinder.How does a Benelli m4 work?The M4 is built with speed and reliability in mind. The action of the M4 is driven by the Benelli Argo system. The Argo system is a dual short stroke, self-cleaning gas piston mechanism. The pistons make the action cycle extremely fast while also keeping the bulk of the gasses and grime out of action. Professional M4 shotguns sold through Benelli tactical are available with the collapsible buttstock. Benelli Tactical and Beretta LE have maintained the belief that the collapsible buttstock, while no longer illegal in the United States, is still only to be made available to law enforcement and government agencies. Professional The Benelli M4 is a 12-gauge semi-automatic shotgun developed by Benelli Armi SpA of Italy. This weapon was designed in 1998. Production began in 1999. The shotgun is highly successful and popular across the world due to its durability, reliability and effectiveness. Professional The Franchi SPAS-12 is a combat shotgun manufactured by Italian firearms company Franchi from 1979 to 2000. The SPAS-12 is a dual-mode shotgun, adjustable for semi-automatic or pump-action operation. Following the United States Federal Assault Weapons Ban, imports of SPAS-12 shotguns to the United States were stopped. Explainer Explainer Benelli Nova Length 45.5-49.5 in. Pundit If you're looking to purchase a Benelli M4 model 11707 in Northern California, River City Gun Exchange in Sacramento sells them. The M4/M1014 with pistol grip and fixed skeltonized stock is legal in California (my opinion and I think most others as well). Pundit Partly it's the rarity and partly it's the superior quality of the Benelli. The M4 is reliable enough to pass Marine Corps. tests and after talking to everyone I know with an M4, they all are happy to have one. Most of the time people who say they aren't worth the money are just pissed over the price tag. Pundit The most common shotguns used by police are 12 gauge 870's or M500's. The most common load is 00 buckshot. A typical 00 buckshot load has nine 00 buckshot projectiles. Pundit The Benelli manual recommends Skeet XXXX Choke. What does that extra money buy me? 03-16-2016, 07:55 PM #2 The short version- the M4 is gas operated, opposed to inertia driven, which seems to be generally more reliable, though heavier. Owner of Aridus Industries. Creator of the Q-DC, CROM, and other fun shotgun stuff. 03-16-2016, 08:25 PM #3 My M1 is heavy enough. Don't need that extra weight 03-17-2016, 01:43 AM #4 The M2 is a slightly updated version of the M1. The biggest upgrade being the comfort tec stock. The M1/M2 is inertia operated. Very reliable with full power duty / defense loads, may not be 100 % with light birdshot etc. the inertia operation also gives you slightly more felt recoil. I've had my M1 since 1988. They are awesome. It points like a fitted sporting shotgun. Like pointing your finger. I had an M4 - it is heavier, reliable with all types of loads but points and handles like a 2x4. It went down the road. I'd like to try the 14" version with a conventional stock as it may address some of the deficiencies I found in the M4. 03-19-2016, 09:40 AM #5 The M2 is a great gun. Mine shoots everything without a hitch. Our local club does a lot of 2-gun matches; I loan out the M2 for guys to try, so it sees a lot of #7 1/2-8 target loads (clays loads not ultra low recoil loads) and it runs great. I put the Scalarworks mount on it, an excellent mount for an RMR. 04-05-2016, 10:19 AM #6 Sorry to necro this thread, but I had a couple of questions on this line based on what I /used/ to know about shotguns, which was a long time ago and a couple lanes over. First, for those familiar with the Haught technique: when I took his class in the nineties, there were a couple of M1s in the class, and the technique properly applied seemed to make them not work. I like the technique and would not want a gun that was incompatible with it. Is the M2 incompatible with it? Second, I vaguely remember stuff about receiver stretching when using a pinned-on side saddle. Is that an issue with the M2? Does it affect the problem with the Haught technique I described above? Does it matter now that side saddles seem to be glued on rather than pinned? 04-05-2016, 05:15 PM #7 Don't get a Benelli M2 if you want to hang crap on it. Recently, a PF member reported problems even with a SF fore end. Not sure about the Haught push, as I have heard it to be a problem. Hasn't been for me with Brenneke magnum slugs, but maybe so with crap hung on it, lighter loads and a stronger push. Likes pretty much everything in every caliber. 04-05-2016, 09:33 PM #8 I run my shotgun smooth, but you never know. Esta página cita fontes, mas estas não cobrem todo o conteúdo. História Em 4 de maio de 1998, o Centro de Pesquisa, Desenvolvimento e Engenharia de Armamentos do Exército dos Estados Unidos (ARDEC) em Picatinny Arsenal, Nova Jersey, emitiu Solicitação #DAAE30-98-R-0401, solicitando envios para uma nova espingarda de combate de calibre 12, semiautomática para os militares dos EUA. Em resposta ao pedido, Benelli Armi SpA de Urbino, Itália, criou e construiu a Espingarda de Combate Benelli M4 Super 90. Em 4 de agosto de 1998, cinco amostras do M4 foram entregues a Aberdeen Proving Ground, Maryland, e após testes intensos, o M4 venceu a competição. No início de 1999, a ARDEC adjudicou do contrato de fusão para Espingarda de Combate de Serviço da M1014 à Heckler & Koch, subsidiária americana para importação da Espingarda de Combate Benelli M4 Super 90. As primeiras unidades (contagem de 20.000) foram entregues ao Corpo de Marines dos Estados Unidos em 1999. Durante o teste, o protótipo foi chamado XM1014, mas após a adoção, o 'X' foi descartado, e a arma foi oficialmente designada como M1014.[1] Veja também Benelli M1 Benelli M2 Benelli M3 Referências 1 «Benelli M4 Super 90 / M1014 JSCS Semi-Automatic Combat Shotgun (1999)».
