General informatics questions and answers

CASE STUDY

Last month you were hired with the title Health Informatics Specialist at an independent community care hospital with 350 beds. The hospital includes a comprehensive outpatient clinic, a rehabilitation center with both inpatient and outpatient services, a cardiac care center, and an emergency room. In addition, four family health centers are located throughout the community. More than 930 primary care and specialty physicians are associated with the hospital, which has a staff of just over 2000 employees. The hospital has an EHR

The hospital has a working relationship with a major academic medical center located 23 miles away. Acute care patients who need more extensive treatment are usually transferred to the medical center. These are often emergency situations, and data are freely shared among the institutions with the best interests of the patient in mind.

Located directly beside the hospital is a 194-bed skilled nursing home. While the nursing home has its own medical staff consisting of a physician and two nurse practitioners, patients needing consults or additional care are usually seen at the hospital with follow-up at physicians' offices. While the nursing home, most of the physicians' offices, and the hospital are independent institutions, there is a long history of sharing health-related data when treating patients who live at the nursing home and are seen at the hospital or in the physicians' offices. This coordination is seen as a general benefit for a number of patients. It appears that most patients have signed a form giving the hospital permission to send information to the nursing home. However, these forms have been stored in individual offices, so it is difficult to determine who has signed what forms and what permission has or has not been given to share information among the nursing home, hospital, and independent medical practices.

Discussion Question

- What additional information is needed to clarify what problems may exist and what changes may be needed in terms of data that are shared among the institutions?
- 2. Can the EHR system and/or e-mail be used to share data among these different institutions more effectively and securely? If yes, how would this be done? For example, what agreements, policies, and procedures might need to
- 3. In your position as Health Informatics Specialist, how would you go about determining whether there are other potential security issues that now need to be managed by the hospital?

(DELHI 2013C) Answer: The use of the Committe Instruction in MySQL is to end its current transactions and make all permanent changes made in the transactions. (DELHI 2012) Answer: The command to delete all lines from the invention; QUESTION 15. Create the table student according to the following instance of the table grade Answer: The SQL command to create a table as the structure is as follows: Create Student Table (Roli No, Varchar Address (20), Stalk of Brincode, Varchar Telephone! 10)); Question 45. (Delhi 2011; All India 2011) Answer: Correct consultation is selected * of the class. The current transion ends defines the interruption points of transactions 2. To find the details of the students whose grades were not inserted, he wrote the following consultation MySQL, which does not Gave the desired result select * from the class where grade = "null" help Sarthak run the query by removing the consultation errors and write the correct query. Write the SQL command used to display the structure of a table (All India 2014c) Answer: (i) Rollback SA³ command can be used to add a new column, to change the size or type of a column or to remove a column from a table. (DELHI 2012) Answer: The two categories of SQL The commands are as follows: (i) ddl ddl means data defining language. Answer: (i) Select I. Natasha, a seller in a socket, created table suppliers. 2 Brands Questions Questions Questions Questions Questions Questions Questions Questions Questions are as follows: (ii) ddl ddl means data defining language. Answer: (iii) Select I. Natasha, a seller in a socket, created table suppliers. 2 Brands Questions Qu Varcharc10); Question 44. (Delhi 2011; All India 2011) Answer: There is 8 lines and 3 columns. Table ¢ âferences 'Club' has 4 lines and 3 (All of the 2014c) Answer: Update EP SET Commission + 100; QUESTION 4. The DML commands are used to enter, display, delete or change data in tables, for example, select, insert, update, delete etc., the commands of this category. (All India 2014) Answer: Fun food cardinality = 13 fun food degrees = 17 Question 25. Brincode is one of the columns of this table, which is the type of character. If you have any appointment about classes of information class 12 Important Questions Chapter 10 database foundations, leave a comment below and we will contact you as soon as possible. (ii) Select doc name at the hospital where doc name as an answer: the output of the specified commands will be as follows: (i) sanjeev (ii) deepak, sanjeev. (Delhi 2011c) Answer: the output of the specified commands will be as follows: Describe table Name; or Describe table Name; QUESTION 22. Write an SQL query to create a table laboratory with the following Answer Structure: The SQL command to create a table as shown is as follows: Create Table Laboratory (entire app ID, App Name Varchar (20), decimal of prices, whole qty); Question 52. Distinguish between the command commands and update from MySQL. In a database, there are two tables with a data sample below, below the table of the department of the Depa consultations for the following: (i) display en, ENAME, Salt and corresponding DNAME of all employees whose age is between 40 and 95; (ii) select customer. What is the goal of the Alter -Table Command in MySQL? Question 13. To find the details of the clients whose number is 345941, she wrote the following consultation MySQL, which did not give Desired Result: Select * from suppliers where the phone = ¢ âference Âdy "345941 Âferences; Answer: Since Phonenumber is the type number, it should not be included in double quotation. SALARY, D.DNAME OF EMPLOYMENT E, Department D Where e.eno = d.mod; (iii) Select ename, zone, salon x 0.3 "income tax" of the employee; QUESTION 41. A table â € œTherantean in a database has grade 3 and cardinality 8. QUESTION 28. Write an SQL query to create a student in the table with the following Structure Answer: The SQL command to create a table as shown The determined structure is as follows: Creat created a "player scoring" table. QUESTION 7. DAN TWO CHARACTERISTICS OF THE CHARGE KEY. Phonenumber is one of the columns of this table, which is the type of character. (All India 2011) Answer: The Alter Table Command is used for the structure of an existing table. 1 mark Questions Question 1. When autocommit is On, the imlycittransuation set defines the connection to the implour transaion mode. Write the MySQL command to open an existing database. (All India 2014) Answer: Alter Table Commands may not affect the table structure. Amit, a salesman in a way, created a table transactions that a value is one of the columns in this table. Item Code, I. QUESTION 30. Answer: The correct query is selected * of friends where you brush = ¢ âference 262122 '; 4 Brands Questions Question 40. (II) DML DML means data manipulation language. Question 6. Name of foreign key and business key may or be the same, but your data type must be the same. What happens when the automatic commitment is defined? Define a foreign key with RDBMS refreshment. Write the MySQL command, which will open an existing database in ¢ â Âdy Âdys "Contacts (Delhi 2011c) Answer: The SQL command, which will be used to open an existing "Library" database. QUESTION 31. Write an SQL query to create a table library with the following Structure Answer: The SQL command to create a table as the structure is as follows: Create table library (full book, book name varchar! 20), Varchar category (20), decimal price, whole qty); Question 51. Question 51. Question 20. Shammi, a student in class XII created a table friend. Answer: Correct consultation is selected * in transactions where amount > 800; Question 37. What is the cardinality and client degree of the table? The current score is one of the columns of this (All of the 2014) Answer: Two characteristics of the principle key is: all values in the primary key field are. Write a SQL SQL To create a table teacher with the following Structure Answer: The SQL command to create a table as the structure is as follows: Create a table teacher (entire teacher, teacher name varchar (20), qualifying varchar (20), date date of appointment); Question 48. Mention two categories in which the MYSQL commands are widely classified. Table Brand Table Write mysql queries for the following (i) display Item code, Item name and brand name of these items, whose price is between 20000 and 40000 (both values included). Question 33. Write two examples of DML commands for SQL. (All of the 2014c) Answer: The samble of the Curinga is used in the similar class to represent any sequence of any, one or more characters. The correct consultation is selected * of suppliers where the phone number = 345941; QUESTION 39. Rewrite the above consultation with the necessary change to help you get the desired output. Name two categorized. (ii) to display Item_code, preconer and brand_name of the item that has Item_name as ¢ œ Â ¢ €. (i) If you have not executed the Commit command, executing which command will revert all the updates made during the current session of work in MySQL? Declaration of reverses the current transformation, which means canceling the errors. (iii) increase the prices of all items by 10%. (iii) display ename, salon, zone and income tax (note the income tax to be calculated as 30% of the salon) of all employees with appropriate column tracks. A fun food of the table, customers. While the reversion command is used to undo the changes made the execution of a transition. He wrote the following command: Select the departmental Code, Max (salon) of the employee: but it has not been desired Mr. William wants to remove the structure from the table. Write two examples of DBMs software. To find the details of the client whose value of transactions is greater than 800, he wrote the following consultation MySQL, which did not give the desired result: select * in the transactions where the correct guery. (All of \(\tilde{a} \) ndia 2012) Answer: the command to open an existing database is as follows: Use database name; QUESTION 16. QUESTION 16. QUESTION 16. QUESTION 18. (DELHI 2014) Answer: The SQL command to open an existing database library will be as follows: Use Library; QUESTION 18. (DELHI 2014) Answer: When autocommit is defined, we need to start an explanation of the transion using a Begin command, but all statements are treated as a one independent transactions? (ii) What effect does the autocommit set on transactions? (DELHI 2012) Answer: The command to display the existing database list is as follows: Show databases; QUESTION 14. (All of the 2014) Answer: Two Categories of MYSQL Commands are: DDL (Data Definition Language) Answer: Two Categories of MYSQL Commands are: DDL (Data Definition Language) Answer: Two Categories of MYSQL Commands are: DDL (Data Definition Language) Answer: Two Categories of MYSQL Commands are: DDL (Data Definition Language) Answer: Two Categories of MYSQL Commands are: DDL (Data Definition Language) Answer: Two Categories of MYSQL Commands are: DDL (Data Definition Language) Answer: Two Categories of MYSQL Commands are: DDL (Data Definition Language) Answer: Two Categories of MYSQL Commands are: DDL (Data Definition Language) Answer: Two Categories of MYSQL Commands are: DDL (Data Definition Language) Answer: Two Categories of MYSQL Commands are: DDL (Data Definition Language) Answer: Two Categories of MYSQL Commands are: DDL (Data Definition Language) Answer: Two Categories of MYSQL Commands are: DDL (Data Definition Language) Answer: Two Categories of MYSQL Commands are: DDL (Data Definition Language) Answer: Two Categories of MYSQL Commands are: DDL (Data Definition Language) Answer: Two Categories of MYSQL Commands are: DDL (Data Definition Language) Answer: Two Categories of MYSQL Commands are: DDL (Data Definition Language) Answer: Two Categories of MYSQL Commands are: DDL (Data Definition Language) Answer: Two Categories of MYSQL Commands are: DDL (Data Definition Language) Answer: DDL (Data De selected * of customers where the phone = ¢ Âdy ~ 259624 Â ; Question 38. Here we give practices of class 12 Important Questions Chapter 10 Fundamentals of the Database. (HOTS; DELHI 2012; ALL INDIA 2012) Answer: Commit command is used to save made during the execution of a permanent transactions on the album. When using the similar clan, which wildcard Do you represent any sequence of any, one or more characters? In addition, it is an example of SQL commands in each category. Sarthak, a class XI student created a "Class" table. On the other hand, the update command is an instrument that is used to modify the data stored in a table. To find the details of the clients whose number of telephone number is 259624, she wrote the following consultation MySQL, which did not give the desired result: Select * of customers where Phonumber = 259624; Help Anushka run the query by removing the consultation errors and write the correct query. (DELHI 2014) Answer: Two examples of software dbms are: Question 11. Answer: Cardinality = 4 degrees = 3 cardinality is the number of lines and the degree is the number of columns in a table. What is the declaration MySQL should be used? To find the desired result select * from Player Score where currenent score > ¢ Âdy,¬; Help ANURAG run the query by removing the connection to the transaion mode automatically. Differentiate the alternative key and candidate key (all of the ã ndia2011) Answer: The attribute or a combination of attributes that have values for each register known as a candidate key, while a candidate key is not The principle key is known as an alternative key. What happens when the command â € œrollback d € © issued in a transactions process? OUESTION 19. INFORMATION PRORTS CLASS 12 IMPORTANT OUESTIONS CHAPTER 10 Database Fundamentals are part of the important class 12 questions of Class 12. (ii) Automit simply means that each declaration in its own transaion § After executing the Commit, we cannot undo or cancel the changes made. (Delhi 2014) Answer: Select DeptCode, Max (Salon) of the employee employee By deptcode; Question 27. He added 2 more lines to him and deleted a column. Answer: Zebi used the distinct class with the Select Command. What is the cardinality and the degree of the table? Underline the corrections made. (All India 2014) Answer: When a reversion command is issued in a transition process of transactions are undone. (DELHI 2014) Answer: Cartesian product cardinality of the 'Club' and Table 'Member' table = 8. (All India 2014c) Student insertion (RNO, Brands) Valuec5, 78.5); Answer: Enter Student Values (RNO, Marks) (5, 78.5); Question 5. Question 26. 26.
