Now, an option will be added on the same page called Screen 1 Configuration. Using this free application, you can easily configure the images of your choice as wallpapers for all start screens. Step 1: Download and install this application from the previous link. Select any image, then choose the "ASE) option of the image of your configuration. The sources for the images depend on what applications and add-ons are installed. Together with the wallpapers, you can also use some Other options, such as transition, add reflex to the upper / lower part, double touch to change images and depth of color. How to configure different wallpapers for each Start Screen on Android? When using these Android free applications , you can easily configure different wallpapers for a different home screen of your phone. And you can have a different wallpaper for everyone using GO multiple wallpapers. and based on the same number of screens at the top of its interface. To add an image as a wallpaper on the corresponding screens, touch in this and open the File Manager. However, this It is not mandatory, you can choose to keep the images selected as wallpapers whenever you want. Step 2: Tap the Add Single Settings. Android devices have many different start screens. Closing thoughts These were some pretty impressive applications to set different wallpapers for each home screen on Android. Tap the Set wallpaper, and after that, all the screens of your home will have the wallpaper you have configured. The It is very simple and has no other customization options such as previous applications. After that you will ask you to specify the screen number. If you want to configure a static background image for each screen, simply go to the main application page of the application, then click on the most with "individuality" individuality Here are some of the available accessories: If you are using this application on a tablet, look at the Solution tab for some domestic applications. Install this application on your device and then go to "Home" "" Menu "> Â ¢ â, Â" WallpapersÂ ¢ â, Â ¢ Â ¢ ¬ â "Wallpapers, ¬. It will make your device look more animated and interesting. Editor ratings: This tutorial talks about how to configure different wallpapers for each home screen on Android. Step 4: After having made the IMA SPECIFICATION Genes for all start screens, return to the main screen that showed you in step 1. In the following example, I have three start screens. When it finishes, the images appear at the top of the page . To have something more than a blank black screen, you should venture into the configuration and make changes to each of your screens. The only image can pull applications such as Dropbox. I really like the fact that I also also Allows you to edit photos before applying them as a wallpaper. First, Ignore it using the AN link Terior and then it. Apart from this, you can also configure other options, such as type of transition, add reflection, image change interval, and many others, all from the configuration of the application. Follow these simple steps to start with this application. Choose Wallpaper. From here, choose the icon to go multiple wallpapers. To reorder them, press and hold an image and arrestrela to the desired place. In my phone I have 5 screens, so I added 5 of those options. Step 2: Detect how many screens are available on your home screen. This tab is where you will set the default value for all screens. In "Live Wallpapers", choose "Multipicture Live Wallpaper", then touch "set wallpaper". In the same way, you can images for all screens. Now, the next thing you should do is configure your wallpaper setting. The only feature in this application is that you can specify a directory of source images in this and then automatically establish the random wallpapers. random. that's ok. Using any of these applications, you can easily configure the different wallpapers for each home screen on Android. You can control the brightness, the color level, the culture, the orientation and the background color. And press the SET FAILL FLOWN button. You can not have different live wallpapers on each screen, only Static images. In the same way, you can change the lock screen to display an image different from any of the other screens. To do this, you simply need to follow the steps listed below. For this step, you must go to "Fried Configuration". "Type of transition" to set your type of preferred screen transition. Multipicture Live Wallpaper Multiferture Live Wallpaper is another free application to configure different wallpapers for each home screen on Android. Multipicture Live Wallpaper This article is useful? In addition, you can choose an album for your home screen, if you want to change the random screen background on the selected home screen. Step 3: Tap at any option The page that will be opened, tap the image source. One of these settings includes having a different wallpaper for each home screen. To resolve this problem, you can use the Multipicture Live wallpaper to add a different image to each start screen, Equal Multipicture Live wallpaper perform basically through all screens From your home and do so that the wallpaper and / or the background can be chosen for each screen regardless of each other screen. The use of separate wallpaper for each start screen can be a good look to improve the appearance of the telephone. Then click on Button apply. For other pitchers, go to the menu, change the wallpaper, then select Live wallpaper. I will reach the accessories in a minute. Each time you change the screens at the menu of your home, a different wallpaper or a background image will appear. To do this, touch the application of the application from your home screen or the appliance drawer. The process of using this application is is Tedious bit, but in the end the result will be satisfactory. If you want to randomly show any photo of a gallery or folder in particular as the wallpaper, select "Album" or "Folder of the Part". If you want to configure a personalized background image for your Android home screen, all you need to do is go to your photo gallery. Add an image to an Android home screen Multipicture live wallpaper is a live wallpaper, so you will have to configure it as your wallpaper as you would with any other live wallpaper in your Android. You will see in your configuration a tab for the Comunión Configuration. When you are changing the configuration of a single start screen, you will have the same options that you did it in the Established Configuration tab. You can select any type of transition, such as slide, vanish, vanish, clean, card, etc. In the next tutorial, I have listed a few Android applications to do the same. FiveWallPapers FiveWallPapers is a free application for Android to configure different wallpapers for each home screen. Specify the screen number, for example 1. You can and as many images you want, depending on the number of screens available on your Android home screen. Go multiple The wallpaper must be on the list: Take and follow the same instructions that was previously indicated. The result is a changing image when sliding the start screens. Ensuring and tracking your smart phone How to clean your smart phone, tablet and other devices. It is possible to have a different wallpaper for each start screen on my Galaxy S8? I tried the live wallpaper of Multipicture, I have set the 6 wallpapers, but it does not work. Use the same process for all screens This applies if you use two or more start screens for your device. To delete an image, touch the icon less in the upper right corner of the image image. Step 4: Once done, click on the OK button and return to the first screen that I have shown in step 1. Therefore, we discover what is needed to configure different wallpapers for each home screen in If you do not check the box to convert this function, the lock screen will be the same as your central start screen. And the best part is that you can add effects in your photo using basic fixing tools. The album pulls images of your Android photo gallery. When you press the plus sign (+), you will be asked to choose the home screen you want to add configurations. When finished, simply touch the Set Wallinfish button to apply these images as wallpaper. At first, the different household screens were not playing well. The problem is that, when you choose an image as a background wallpaper, it extends through the 3 screens. Follow these simple steps to configure different wallpapers for each home screen with the Multipicture live wallpaper. You can choose between built-in images or add them from your gallery. Most of the time, the part of the image you want to see is right in the crack between the screens. On the next screen, choose an image for each home screen. Accessories for the Multipicture Live Screen Fund Another option is to add a plug-in to the Multipicture live wallpaper. The Android operating system is known from the different ways in which you can customize the start screens, add widgets and modify any visual component of the UI. You can choose a single image, an Album or an image folder. After that, to it up and from its interface, tap the configuration. Multiple wallpapers Múltiples Wallpapers is a simple application to configure different wallpapers for each home screen on Android. After that, you will ask you to specify an image for that home screen. Step 1: Download and install the FiveWallpapers application using the previous link. Download the Call Application Live Wallpaper from Google Play Store. You can only cut the image and specify the design as best setting or full screen. If you do not want any transition, simply select "Nobody". Change the configuration for Tablet Honeycomb obtained everything working, as it should, even if the tablet is executed 4.1. Final thoughts Using using The live wallpaper is a sure way to solve the problem of having more than an image as its Android background. Use The Add button to select images for start screens. It is also free to modify the configuration according to your personal preferences. Say, for example, your home screen has a total of three screens. Starting this application is very easy. Then, you will have the option to use the image as a contact photo or wallpaper. This will allow you to configure a different configuration for each background image that you configured on your home screen. In this tab, you will see five masters. Then, in this way, it can easily configure different wallpapers for each home screen using this free application. Application has a fairly simple interface and can easily configure it to use it. If you have seven start screens, the application will allow you to add up to seven images. And the option of the imaging folder will look for images along the way to tell you to see. You can choose a desired wallpaper from the gallery for each home screen, add transition effects, image quality, and much more. Using this free application, you can configure many images as a screenshot simply drag and drop. Step 3: If you want to add some effect on an image, then simply touch long to open the editor. Use the same method to create the same number of options, as there are a number of home screens available on your phone. If you want to add different wallpapers for the different start screens on your Android phone, this tutorial will help you. Note that this works for all launchers, and you do not have to install Golauncher EX to work. Sitt, go to the configuration of your pitcher Change the wallpaper. You will find two buttons on your interface: one to add images and another to apply the wallpaper. If you want to cut images, you can choose the clipping option to do so. After that, it invokes it and when you see your interface, touch the configuration button. Configuration. The tab to add individual settings is where you will be able to add a specific image to the start screen of your choice. Configure the rest of the configuration of your application and once you are finished, simply return to your home screen and that is. How do you handle your Android wallpapers? These configurations will be canceled by the next tab, I mention it. Then you will see the full list of customizable options of the application. Choosing the images to use by default, has three options for image sources. These tabs allow you to choose the source of the images, the background color of the image is smaller than the screen, how the image will be adjusted to the screen and a pair of imaging editors Genes You will choose the álbum (s) with the images you would like to rotate. To configure your preferred wallpaper source, go to "Screen Settings"> "Family Settings", choose "Image Source". On each screen, you want to use a background image that is completely different from the other. By learning how to configure several wallpapers, you can literally transform your Android device into a digital photo frame. Thank you! Android is well known for the different ways to modify and customize the start screens. Download the Multipicture application now, and if you want to set a different wallpaper or a different background image for each screen. In this way, you can define the exact source of the photos you want to use as background images. The transitions are made beautifully, and the images seem to be soft enough to mix with any launcher theme. The application actually creates a live wallpaper divided it into exact number of sections as the launcher of your phone supports. Then, it was another application to establish different funds of For each start screen on Android. This step varies with different pitchers. If you use Go Launcher EX, you can press and hold the center of the screen, and you must obtain a menu bar at the bottom. These add-ons will draw images from other sources, such as a website or or Shared site such as Picasa or Flickr. If you are an enthusiast of personalization, then I'm sure you would like this application. And you can choose different photos of the gallery. However, the application does not have as many features, since the previous application has, but you can configure different wallpapers through it. From the editor, you can trim, turn, adjust the view, change color, and you can add effects in it. At the end of step 4, wallpapers will apply on all home screens, as specified. This application is a welcome solution if you are looking to maximize your images and can not choose only one to set. Choose the last and that is. that.
